

ABOUT US

CODE:ME Foundation is a programming school which offers more than a possibility to learn a programming language. It provides opportunity to change one's trade and grow based on knowledge of our experts and experiences of our community.

We know that people drive the whole company forwards and investing in yourself or your employees is the best investment possible. Through teaching programming we help people enter the IT market (change their job) or broaden their competences and use the opportunities that IT provides. We describe trends and combine professional training with further growth and support. Presence of a big community hugely motivates us to work and to expand in other areas.

We are a team of technology-fascinated experts who love to share their passion and experiences. Since we started four years ago, we have provided training for over 1800 people, who often were completely new to programming and now work for some of the biggest businesses. CODE:ME brand became a staple of quality, working with some of the biggest companies on the market. We have already worked or are working with companies such as: Prudential, Ericsson, BPH Bank, Polish Press Group, NFZ, University of Gdańsk or Polish Police Headquarters.

We are cooperating with the biggest brands on the market, such as Intel, IBM, Amazon and Microsoft, who support us with their expert knowledge and the newest equipment.

Besides courses and teaching, CODE:ME foundation is one of the biggest organisers of hackathons and other IT-related events in Poland. Up to date, CODE:ME has organised over 100 events for more than 3000 participants. These events include: NASA Space Apps Challenge, inspired by the American Space Agency, and Global Game Jam, the biggest world-wide event gathering video-game creators.

We're leading one of the biggest tech community in the north Poland - Hackerspace Tricity with nearly 2000 people.

It is predicted that in coming years, programming will become one of the necessary skills, and that's why it is important to learn it now and to learn it from the best.
